Machine Learning

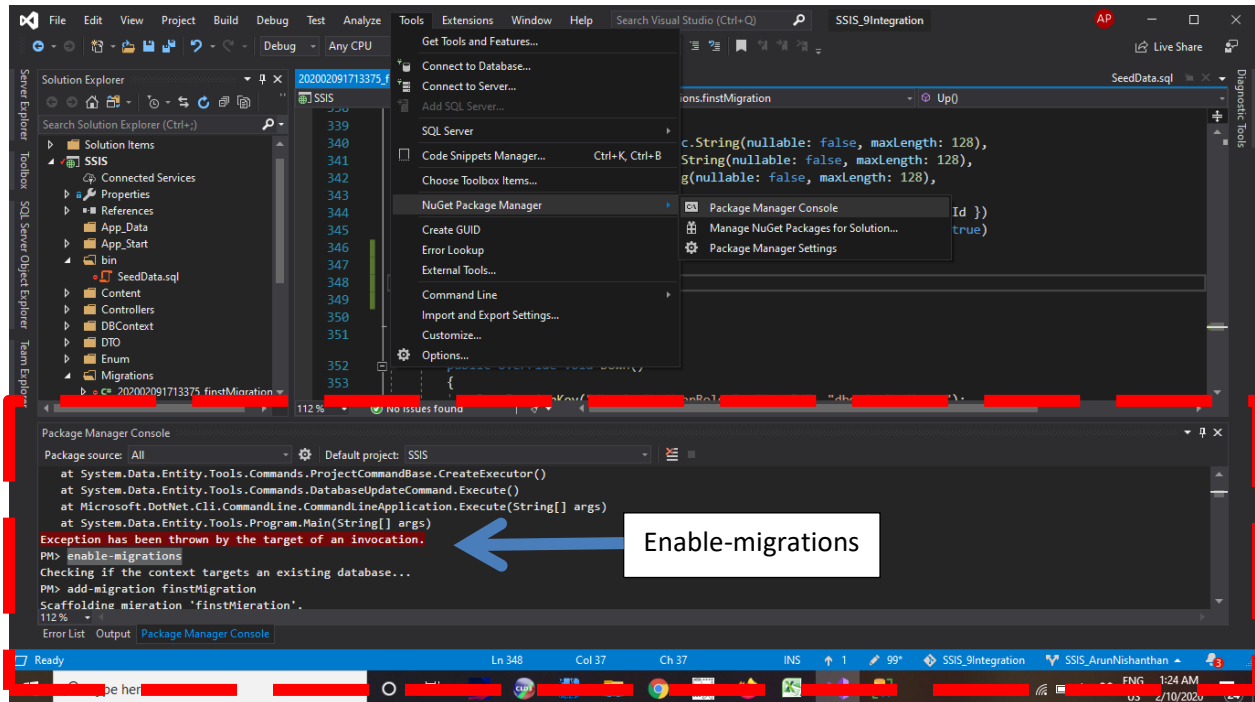

We have python script inside the path “SSIS\ML-Data\recommend_quantity.py”, please run this in Spyder so that the actual web app can make use of that.

We have used code first approach in this project. Please follow these steps to run the application and Android.

Step 1 – Go to Package manager console

Step 2 – Enable migrations

Step 3 – Please add one migration (add-migration InitialModel).

Add one line

SqlFile("SeedData.sql");

at the end of the Up method. Then update the database and run the application.

Note : We have placed the SeedData.sql file in the bin.
